INSTALLATION INSTRUCTIONS
For the optional built-in thermostat of the “WRI Series”

THE INSTALLATION MUST BE EXECUTED BY A QUALIFIED TECHNICIAN

RISK OF ELECTROCUTION

INSTALLATION:
1- Remove front cover and junction box cover.
2- Single-pole thermostat:
   Screw the thermostat on the junction box cover.
Double-pole thermostat:
   Insert the cardboard insulator supplied in the kit between the thermostat and the junction box cover and screw (Detail A).
3- Connect the thermostat to the unit according to the wiring diagram (Fig. 1) and the drawing (Fig. 2a or 2b).
4- Make the electric connections of the unit according to local and national codes in force. Refer to the wiring diagram (Fig. 1).
5- Single-pole thermostat:
   Replace and screw the junction box cover.
Double-pole thermostat:
   Fold and insert the cardboard insulator between the thermostat and the side of the recess box and screw the junction box cover in place.
6- Replace and screw the front cover of the heater before testing the heater.

BUILT-IN THERMOSTAT SETTING:
The setting of the built-in thermostat can be done with the supplied knob or through the hole in the front cover with a small slotted screwdriver if you have a tamperproof thermostat.

To set the thermostat at the desired temperature:
- Set thermostat at maximum temperature (turn clockwise).
- When the desired temperature is reached, turn the thermostat counter-clockwise slowly until you hear a “click”.
- The thermostat will keep this room temperature.

Cardboard insulator to insert between the thermostat and the side of the recess box.
