Indeeco part number 1007030
Honeywell number TH3210D1004

PRO TH3210D
Non-programmable Digital Thermostat
Product Application
This thermostat provides electronic control of 24 VAC heat pump systems with auxiliary heat (2 heat/1 cool).

Power Type
- Battery power
- Common wire
- Common wire with battery backup

System Settings
- Heat, Off, Cool, Em Heat

Fan Settings
- Auto, On

Must be installed by a trained, experienced technician
- Read these instructions carefully. Failure to follow these instructions can damage the product or cause a hazardous condition.
- Check the ratings in this booklet to verify that this product is suitable for your application (see page 11).
- Always test for proper operation after installation (see pages 7-8).

CAUTION: ELECTRICAL HAZARD
Can cause electrical shock or equipment damage. Disconnect power before beginning installation.

MERCURY NOTICE
If this product is replacing a control that contains mercury in a sealed tube, do not place the old control in the trash. Contact your local waste management authority for instructions regarding recycling and proper disposal.

Installation tips

Install the thermostat about 5 feet (1.5m) above the floor in an area with good air circulation at average temperature.

Do not install in locations where the thermostat can be affected by:
- Drafts or dead spots behind doors and in corners
- Hot or cold air from ducts
- Sunlight or radiant heat from appliances
- Concealed pipes or chimneys
- Unheated/uncooled areas such as an outside wall behind the thermostat
Pre-installation checklist

Package contents
Check to make sure your package includes the following items:

- PRO TH3210D digital thermostat (wallplate attached to back)
- Operating manual
- Wall anchors and mounting screws (2 each)
- AA alkaline batteries (2)

Required tools & supplies

- No. 2 Phillips screwdriver
- Small pocket screwdriver
- Drill
- Drill bit (3/16” for drywall, 7/32” for plaster)
- Hammer
- Pencil
- Electrical tape
- Level (optional)
**Wallplate installation**

Grasp top and bottom of wallplate and pull to remove from thermostat.

Remove the wallplate from the thermostat as shown at left, then follow directions below for mounting.

1. Pull wires through wire hole.
2. Position wallplate on wall, level and mark hole positions with pencil.
3. Drill holes at marked positions as shown below, then tap in supplied wall anchors.
4. Place wallplate over anchors, insert and tighten mounting screws.

Drill 3/16” holes for drywall.
Drill 7/32” holes for plaster.

![Wallplate Diagram]
CAUTION: ELECTRICAL HAZARD. Can cause electrical shock or equipment damage. Disconnect power before wiring.

Wiring

1. Loosen screw terminals, insert wires into terminal block, then retighten screws.
2. Push excess wire back into the wall opening. Keep wires in shaded area as shown at left.
3. Plug the wall opening with non-flammable insulation to prevent drafts from affecting thermostat operation.

Terminal Designations

</tr>
</tbody>
</table>

NOTES

C terminal
The C (common wire) terminal is optional when thermostat is powered by batteries.

L terminal
Heat pump reset. L terminal is powered continuously when thermostat is set to Em Heat.

Wire specifications
Use 18- to 22-gauge thermostat wire. Shielded cable is not required.
Wiring diagram

1. Power supply. Provide disconnect means and overload protection as required.
2. Optional 24 VAC common connection.
3. Use either O or B terminals for changeover valve.
4. L terminal is powered continuously when thermostat is set to Em Heat.
5. Install field jumper between E and Aux if there is no emergency heat relay.
Power options & mounting

AC Power
The thermostat can be powered by 24 VAC power, or by batteries.
To wire the thermostat for AC power, connect the common side of the transformer to the “C” terminal as shown at left.

Battery Power
The thermostat can be powered by batteries alone or, if used with AC power, can provide backup power to the display during power interruptions.

To Mount Thermostat
Align the 4 tabs on the wallplate with corresponding slots on the back of the thermostat, then push gently until the thermostat snaps in place.
Installer setup

Follow the procedure below to configure the thermostat to match the installed heating/cooling system, and customize feature operation as desired.

Press and hold both buttons

To begin, press and hold the ▲ and ▼ buttons until the display changes

Press ▼ to change settings
Press ▲ to advance to next function
Press and hold ▼ ▲ to exit and save settings

Installer system test

After completing the installer setup above, press the ▲ button again to begin a system test (see next page).
installer system test

Follow the procedure below to test the heating and cooling system.

1. Set SYSTEM switch to Heat.
2. Press ▼ to turn on and check systems (see table, below).
3. Press ▼ until systems turn off.
4. Set SYSTEM switch to Em Heat and repeat steps 2-3 above.
5. Set SYSTEM switch to Cool and repeat steps 2-3 above.
6. Press and hold ▼ ▲ to terminate test at any time.

**CAUTION: EQUIPMENT DAMAGE HAZARD**

Compressor protection (minimum off time) is bypassed during testing. To prevent equipment damage, avoid cycling the compressor quickly.
Quick reference to controls

Digital display screen

Temperature buttons
Press to adjust temperature settings

System switch
- **Cool**: Thermostat controls only the cooling system.
- **Heat**: Thermostat controls only the heating system.
- **Off**: Heating and cooling systems are off.
- **Em Heat**: Thermostat controls emergency and auxiliary heat. Compressor is locked out.

Fan switch
**On**: Fan runs continuously.
**Auto**: Fan runs only when heating or cooling system is on.

Quick reference to display screen

Current inside temperature

Temperature setting

Low battery warning

System status
- **Em**: Emergency heat on
- **Aux**: Auxiliary heat on

Heat On/Cool On:
(Flashes when waiting for compressor restart)

Built-in compressor protection (Setup Function 15)

This feature helps prevent damage to the compressor.

Damage can occur if the compressor is restarted too soon after shutdown. This feature forces the compressor to wait for a few minutes before restarting.

During the wait time, the message **Cool On** or **Heat On** will flash on the display. When the safe wait time has elapsed, the message stops flashing and the compressor turns on.
In case of difficulty

If you have difficulty with your thermostat, please try the suggestions below. Most problems can be corrected quickly and easily.

Display is blank
- Check circuit breaker and reset if necessary.
- Make sure heating & cooling power switches are on.
- Make sure equipment door is securely closed.
- If battery powered, make sure fresh AA alkaline batteries are installed.

Temperature settings do not change
Make sure heating and cooling temperatures are set to acceptable ranges:
- Heat: 40° to 90°F (4.5° to 32°C).
- Cool: 50° to 99°F (10° to 37°C).

Heating system does not respond ("Heat On" appears on screen)
- Check for 24 Vac at the equipment on the secondary side of the transformer between power and common. If voltage is not present, check the heating equipment to find the cause of the problem.
- Check for 24 Vac between the heat terminal (Y) and the transformer common. If 24 Vac is present, the thermostat is functional. Check the heating equipment to find the cause of the problem.
- Check for loose or broken wires between the thermostat and the heating equipment.

Cooling system does not respond ("Cool On" appears on screen)
- Check for 24 Vac at the equipment on the secondary side of the transformer between power and common. If voltage is not present, check the cooling equipment to find the cause of the problem.
- Check for 24 Vac between the cooling terminal (Y) and the transformer common. If 24 Vac is present, the thermostat is functional. Check the cooling system to find the cause of the problem.
- Check for loose or broken wires between the thermostat and the cooling equipment.

"Cool On" or "Heat On" is flashing
- Compressor protection timeout is engaged. Wait 5 minutes for the system to restart safely, without damage to the compressor.

"Heat On" is not displayed
- Set the System switch to Heat, and set the temperature level above the current room temperature.

"Cool On" is not displayed
- Set the System switch to Cool, and set the temperature level below the current room temperature.
Accessories

Please contact your distributor to order accessories.

Cover plate assembly ........................................Part Number 50002883-001
(Used to cover marks left by old thermostats.)

Specifications

Temperature Ranges
- Heat: 40° to 90°F (4.5° to 32°C)
- Cool: 50° to 99°F (10° to 37°C)

Operating Ambient Temperature
- 32° to 120°F (0° to 48.9°C)

Shipping Temperature
- -20° to 120°F (-28.9° to 48.9°C)

Operating Relative Humidity
- 5% to 90% (non-condensing)

Physical Dimensions
- 3-13/16" H x 5-3/8" W x 1-1/4" D
- 97 mm H x 137 mm W x 32 mm D
